Switching to Scrotal

T gels cannot be applied to genital areas because high alcohol content, may cause scrotal irritation.⁴

Scrotal Dosing

- Recommended starting dose is 25mg (0.5mL)
- Titrate up or down by 12.5mg (0.25mL) increments following serum blood test, if required.
 - Two serum testosterone levels should be taken at 3 hours (peak) and 24 hours (trough) after the 15th day of starting treatment.
 - Do not exceed 1mL (50mg) dose per day.
 - The scrotum is not required to be shaved prior to application.

Injection
T levels at trough or return of symptoms

Topical
No washout period required
